Scale
Distributed Data Processing
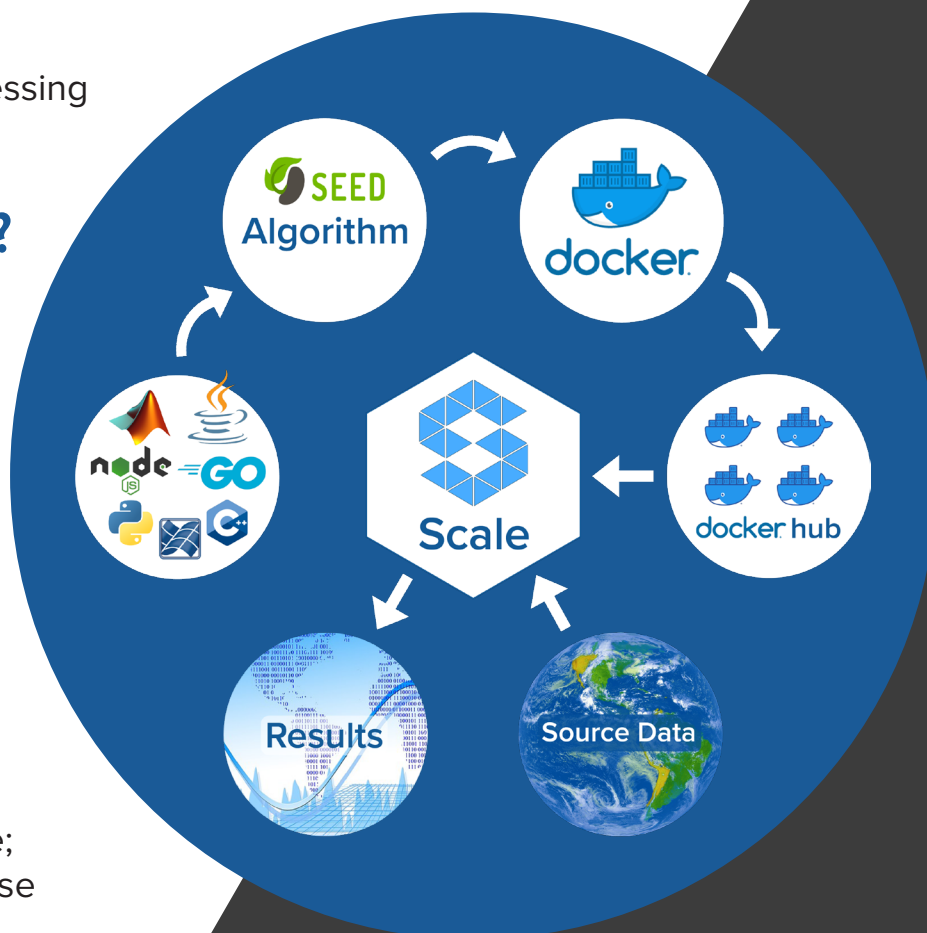

Open Source Download now at github.com/ngageoint/scale

What is Scale?

On demand, automated processing of large-scale datasets

What can Scale do for you?

- Integrate your own algorithms from almost any programming language

- Combine small, reusable modules to optimize complex algorithm performance

- Prioritize actions to process the most critical data first

- Monitor processes in real time; view progress and resource use

- Rapidly validate algorithms against large amounts of data

SEED Algorithm → docker → docker hub → Scale → Results / Source Data

Schedule a Demonstration

The Scale project is a product of NGA Research.
